

BRIGHTVUE-NDR Case Study: Software Enterprise

Securing and monitoring security across the enterprise

A software enterprise wanted to ensure that it is able to comprehensively secure its assets spread across its branch offices and remote workers and monitor them from a central location, in view high risk perception in post-Covid scenario.

Challenges:

- High percentage (>70%) of end-points outside the main corporate site now are logging in using VPN.
- Remote worker devices are subject to higher risks because of less secure home networks
- Inability to determine risks and triage based on incidents

BrightVue-NDR helped reduce incident noise and address key risks and anomalies in a comprehensive manner

Outcomes:

- Complete visibility of usage, traffic and threats from a single tool
- Proactive monitoring for threat vectors

“BrightVue-NDR helps us to secure our entire digital infrastructure in a comprehensive manner.”
